

introducing the natural element collection

introducing the natural element collection

For over 30 years, Soft Play® has been known as the leader in contained play. Committed to moving FORWARD, Soft Play introduces the The Natural Element Collection to compliment today's modern and progressive interior design trends and help you meet the ever-evolving needs of your customers.

play value. The Natural Element Collection is designed to encourage creative and free play, opening the imagination to endless ways to play on the equipment. With no traditional directed start and finish, children are able to play throughout the structure and various components in their own unscripted adventure.

modern design. The wooden structural columns compliment today's interior design trends. The warmth of natural wood provides design aesthetics not traditionally seen on contained playground equipment. As a renewable resource, wooden structures also carry a go-green initiative.

smaller footprint. Updated grid size proportions elevate play to the maximum. A reduction in deck sizes maintains the high level play pattern while reducing the overall footprint of the play structure. The smaller footprint means a better optimization of the space used within the store.

With this unit design, we once again reimagined the contained playground!

New play events

The Natural Element Collection introduces new play events that are tested and approved by kids! All elements of this playground come to life with an orchestration of energetic motion. The opportunities for climbing, twisting, and traversing the play scape are unlimited.

1 Spider

The Spider climb challenges physical and cognitive skills needed to navigate through a maze of fun.

2 Ripple

This uniquely shaped deck adds dynamic physical and visual amusement to the playground aesthetic.

(3) Cooling Tower

This rope climb promotes upper-body strength, while encouraging children to discover new and exciting ways to ascend through their space!

(4) Eclipse

Cantilevered, curved body of the Eclipse provides a compact challenge-transition between two levels. An element of daring while suspended high in the air.

5 Scoop

This slithering, twisting climber promotes upper-body strength, core fitness and giggles. Playful textures, portholes and configurations provide unique play patterns and design.

6 Zero G

Suspending rings sway back and forth as kids scramble to the other side 2 with playful finesse.

Best product in contained play that I've seen for all developmental aspects for kids today. The new equipment challenges both gross motor and cognitive skills as they not only move and use different muscle groups but are challenged to make decisions on how they approach the next event."

Teri Hendy - President Site Masters, Inc.

featured play events: EZ access climb, wobble hopper, sky wheel, 4' curved slide, integrated toddler area that includes sprouts spin cup, loops and piano panel

"We recently completed a rebuild in Huber Heights, OH. The PlayPlace has always been very popular at this location but now that it has been replaced with a new Active Play unit it is more popular than ever. Competition is greater now than ever before. The Soft Play Active Play unit helps differentiate us from everyone else."
